

ECOSYSTEM MAPS

How does a growth tele-healthcare change the healthcare ecosystem?

By mapping out interactions between all stakeholders (patients, providers, payers, etc.), service design helps telehealth platforms fit naturally into people's lives and existing health-care workflows, overcoming one of the main reasons early telehealth solutions failed—poor integration and adoption

CLINICAL CARE DELIVERY

Tele-healthcare reduces healthcare costs by minimizing unnecessary in-person visits, optimizing resource utilization, and supporting early intervention for chronic conditions.
